Manuscript Number:	Ms_JPRI_80432
Title of the Manuscript:	Case report on management of thrombosis in popliteal artery, arterial embolization and thrombosis of left limb
Type of the Article	

### **General guideline for Peer Review process:**

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<https://www.journaljpri.com/index.php/JPRI/editorial-policy>)

### **PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<p>The authors present an interesting report, however, some aspects should be considered before publication</p> <ul style="list-style-type: none"> <li>-most importantly: what is the clinical message? What is the "key message" of this manuscript? What may the reader take from your case except from a simple presentation? Anything special regarding diagnostics/course/treatment/outcome? Please formulate such message</li> <li>-Spelling should be checked, if possible (i.e. "stent placement" instead of "sent placement), or "balloon angioplasty" instead of "balloon palsy"</li> <li>-Patient identification and present medical history read the same</li> <li>-What is "RTPCR-negative"? HIV-RTPCR?</li> <li>-Please avoid non-standard abbreviations to avoid confusion to the reader and explain all abbreviations used throughout the manuscript.</li> <li>-please provide reference ranges for your laboratory assessments</li> <li>-Please use active ingredients instead of brand names throughout the manuscript (i.e. amlodipine instead of amlong)</li> <li>-what is the reason you performed these lab analyses in this patient? Why not D-Dimer? Please discuss in your manuscript</li> <li>-Was the leg red or blue? You use both terms. In theory the leg should be pale (Pratt's 6P). Please discuss</li> <li>-Dry or wet gangraene?</li> </ul>	
<b>Minor</b> REVISION comments		
<b>Optional/General</b> comments
