PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The article is good but it needs adjustments in the writing to focus on the state of the art of what the authors really want to show. I think the authors can be bolder and explore better both in the context of obtaining the data with more variables and exploring the results better. Data obtained from clinical studies are more valued. It's a good job.	
Minor REVISION comments	The study deserves a good scientific writing for improvement.	
Optional/General comments	Try to improve the idea of a clinical study and don't forget that you must go through a Research Ethics Committee.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i> Yes, any study involving humans and animals requires approval by Ethics Committees.
