### **PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	It's not the case	
<b>Minor</b> REVISION comments	<ol style="list-style-type: none"> <li>1. I believe that questions 5 and 6 do not interfere with the spread of the infection itself, which is the objective of the study, focusing more on the psychological consequences that this care can cause in children.</li> <li>2. In the methodology it would be interesting to show the age range of the children assisted</li> <li>3. The result does not address all the research questions</li> </ol>	
<b>Optional/General</b> comments	<p>I recognise that the impact of the COVID-19 pandemic can affect the work of dental professionals. This submission reports an overview on the preparedness of Pediatric dentist in managing a case in their dental operatory in COVID times. It provides interesting data on both on the professional behavior and technical knowledge of a specific portion of dentists in the prevention of COVID-19 in childcare. However, the main weaknesses are the lack of information on the results obtained by professionals. According to the variation of the results presented, was there a decrease in the rates of contagion by COVID 19? For such an evaluation it will be necessary to know the percentage of professionals already infected or who have already been vaccinated. Such information is not essential, but it would make the research more complete. This review, in principle, may be published if more details can be completed, as per previous comments.</p>
