PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The present manuscript aimed to evaluate a new therapeutic methodology for rheumatoid arthritis. The authors concluded that the results favor the use of this therapeutic method. However, some observations must be considered: <ul style="list-style-type: none">- Was the informed consent form applied to the patients? Was the study submitted to and approved by the research ethics committee? If yes, was it approved? If approved, add the approval number (protocol).- The statistical tests used must be described in the methodology.- I suggest that the data from chart 1 be converted into a table.- Table 1 can be converted into a graph.- Discussion of results should be expanded.- What is the degree of evidence of the present study? A randomized clinical trial would not be ideal?	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
