<https://www.journaljpri.com/index.php/JPRI/editorial-policy>

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	Data analysis would be more exploration for example done other types of data analysis, using regression, box plots, scatter plots etc. This study is strictly descriptive The table 1 must use to show characteristics of the sample (age, sex, area of resident, education level, type of diseases, etc) Table 2 it may be timeline of occurrence of disease and age	
Optional/General comments	Suggestion: use regression models to examine the relationship between diseases and age. We think the study could be robust, not only descriptive occurrence of diseases by age. In discussion is necessary highlight better those patients were from hospitals this cases increases an incidence of diseases. They were illness population.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
