PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Unclear about numbers from study in text you state 87 patients with dysfunction yet you give 13 with global 11 with isolated systolic dysfunction and 37 with diastolic dysfunction. That adds up to 61. In table 3 numbers are different and add up to 97 not 87. Comparing patients to those with anemia was very good but what was source of anemia For exam there is an incidence of pulmonary microemboli with sickle trait which can effect RV function and perhaps LV. Why do you think the modifiers had no effect. Would think the number of transfusions or duration of illness would have some effect, can you comment on this.	
Minor REVISION comments		
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<u>(If yes, Kindly please write down the ethical issues here in details)</u>
