PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	<ul style="list-style-type: none"> -I see that author has used liberal feminist theory, social feminism theory – how it's relates with women entrepreneurship? Should be revised. It can also use in concluding remarks. -Hypothesis is ok, but discussion of result and conclusion should be more specific. - What is the outcome of this research? Need to clarify by author. - I personally recommend minor connection and grammatical revision. 	
Minor REVISION comments	<ul style="list-style-type: none"> -SPSS version is old (version 12). -Variable is well selected; (1) age, (2) marital status, (3) type of enterprise (all are demographic variables). -Method of SPSS is ok. Author is used Regression analysis and Friedman's Q test. My question is how Chi-Square test related with Friedman's Q test. For showing any relationship Chi-Square test is best option. 	
Optional/General comments	<p>In Abstract, The study concluded that, the strength in the identified prospects will help curtail the gender biases in favour of the men- this line should be revised.</p> <p>In Problem statement, Should this trend continue, it would take a lot years to close the gender gap as it relates to entrepreneurship. – This line should be revised.</p> <p>The paper is organized thus, following the introduction is the literature review. The next section is method of study which is followed by analysis of data and discussion. The last section is the concluding remarks. – No need to write this type of writing in scientific paper/ academic journal. Please recheck before final submission.</p>
